

How to create flutter project

- Using CMD.
- Using Vs code.

How to Clone flutter project

- From Github

Explanation of flutter project

- what is Lib?
- what is IOS
- what is android
- what is web
- what is .yaml file

What is difference Widget

- Widgets describe what their view should look like given their current configuration and state.
- It includes a text widget, row widget, column widget, container widget, and many more.
- Each element on a screen of the Flutter app is a widget

What is difference between stful & stless

- Stateless widgets are the widgets that don't change.
- i.e. they are immutable.
- Its appearance and properties remain unchanged throughout the lifetime of the widget.

What is difference between stful & stless

- Stateful Widgets are the ones that change its properties during run-time.
- They are dynamic i.e., they are mutable and can be drawn multiple times within its lifetime.
- It can change its appearance in response to events triggered by user interactions or when it receives data.
